

# PLANTING YOUR TREE!

1

Keep your tree in a cool, dark place until you plant it - keep the roots moist!

2

Please review the [tree planting tutorial](#) and [planting instructions](#).

3

Put some mulch around your tree.

4

Protect your newly planted tree from wildlife and lawnmowers with a little fence and netting.

5

Water generously or in accordance with recommendations for your [particular tree species](#).

6

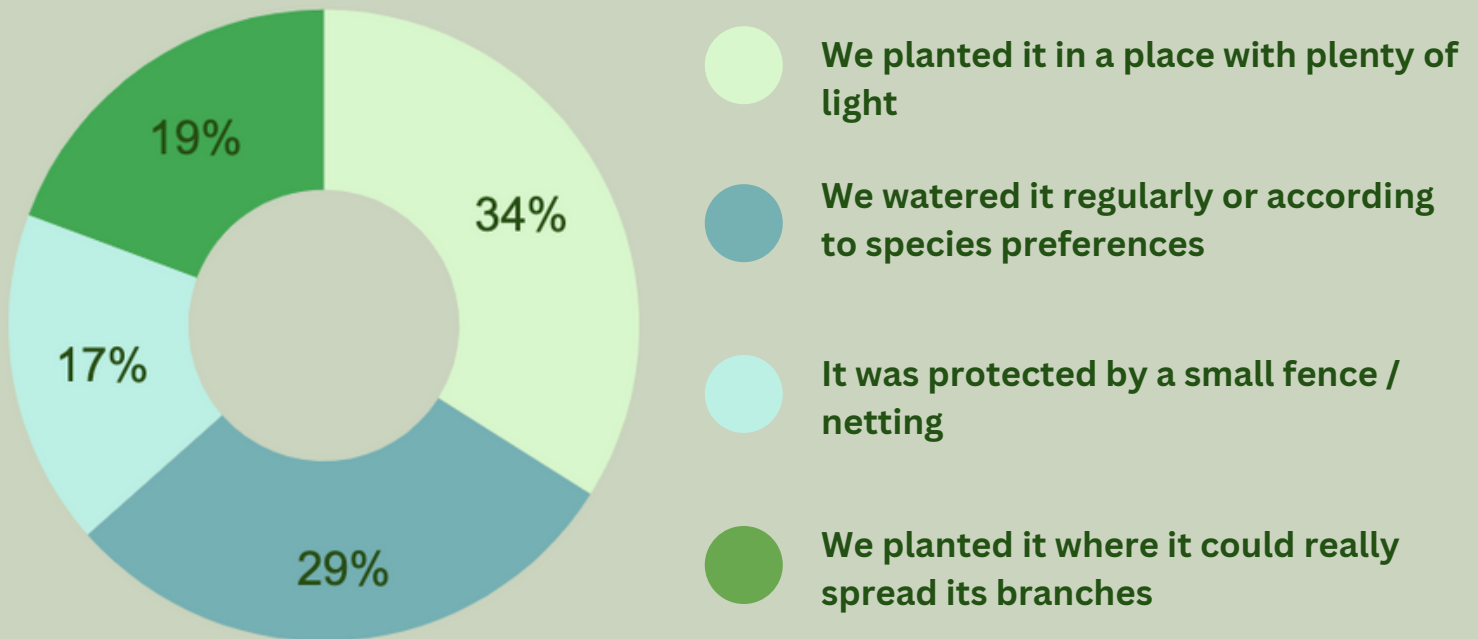

Take a picture with your tree and share it with us on our [Facebook](#) page! We love collecting ["Then and Now"](#) photos!

Neighborhood Forest  
giving trees to children

# PARENTS SHARE WHAT HELPED THEIR CHILD'S TREE SURVIVE - (OR NOT)

## MY TREE SURVIVED BECAUSE ...

## MY TREE DID NOT MAKE IT BECAUSE ...

# PLANT... AND PLANT AGAIN!

"These trees are small and vulnerable. Not all of them will survive and that is okay! It is a part of life and a part of the tree planting process. We do our part and then we have to leave the rest to Mother Nature. A lost tree seedling might break a child's heart and there is a great lesson in this too. We mustn't give up! We will keep sending you trees each year and we will keep on planting them - I had to plant many trees before this one finally made it and reached maturity!"
