

SUCCULENT CARE INSTRUCTIONS:

1. Initial check

Check the moisture of the soil after receiving your succulent. Water if the soil is very dry. Do NOT water if soil is wet/moist.

2. Finding a good location

Place your succulent near a window so it can get sunlight! If you have pets, be sure to keep your succulent out of reach. Most succulents are considered non-toxic, but it's best to avoid ingestion by our furry friends.

3. Sunlight / Shade

Give your succulent 2-4 hours of (sun)light every single day. Do not exceed! Too much sun could burn the leaves. Your succulent loves a little shade too.

4. Watering

Water when the soil feels very dry (1-2 times / week). Gently stick your finger into the soil to check the moisture level - if the soil is very dry, water your succulent. Do not over water - this will cause root rot!

5. Take a picture!

Take a picture with your succulent and share it with us on Facebook or Instagram! Don't forget to tag @neighborhoodforest
